IN THE CLAIMS:

and

Cancel claims 2 and 5.

- 1. (Currently Amended) A liquid crystal display comprising:
- a first substrate;
- a gate line formed on the first substrate;
- a data line formed on the first substrate and intersecting the gate line;
- a pixel electrode disposed substantially in an area defined by the gate line and the data line;
- a thin film transistor including a gate electrode connected to the gate line, a source electrode connected to the data line, and a drain electrode connected to the pixel electrode;
 - a second substrate facing the second substrate;
 - a common electrode formed on the second substrate;
- a liquid crystal layer interposed between the first substrate and the second substrate;

first and second domain defining members defining a plurality of domains in the liquid crystal layer,

wherein the drain electrode is disposed near a corner of one of the domains—;
wherein each domain has a pair of major edges extending parallel to each other;

wherein the drain electrode has a plurality of edges and the edges of the drain electrode include a first edge extending perpendicular to the major edges of the domains and located closest to a center of the one of the domains.

2. (Cancelled)

- 3. (Currently Amended) The liquid crystal display of claim 2 1, wherein the major edges of the domains make an angle of about 45 degrees with the gate line.
- 4. (Currently Amended) The liquid crystal display of claim 2 1, wherein the drain electrode has a first edge perpendicular to the major edges of the one of the domains.

5. (Cancelled)

- 6. (Original) The liquid crystal display of claim 1, wherein the first and the second domain defining members include cutouts provided in the pixel electrode and the common electrode.
- 7. (Original) The liquid crystal display of claim 1, further comprising a storage electrode overlapping the first domain defining member.
